

# PRODUCT PROFILE

## UNI FLORIDA WASH

### The one-step ecological roller & blanket wash

**UNI FLORIDA WASH** is a water-miscible ecological wash that meets today's ecological cleaning requirements. Compare it to your current blanket and roller wash. It is pleasant to use and cleans well without strong solvency. No vile odors, no strong irritating vapors are emitted into the pressroom atmosphere, making it safer for pressmen's health.

**UNI FLORIDA WASH** contains no water, but it's superior formulation enables it to couple with water and form a solvent-water emulsion. So, in one simple step, the solvents remove the solvent-soluble contaminants on rollers and blankets, while the water emulsion removes the water-soluble glaze caused by gum, fountain solution, lint, paper fibers, etc., conditioning rollers and blankets, leaving a smooth, ink-receptive surface.

#### ADVANTAGES

- Less hazardous to the pressmen's health than most washes
- Non photochemically reactive
- Penetrates deep to clean rollers and blankets in just one step
- Economical. Mix it with up to 30% water
- Excellent for fast color changes

#### DIRECTIONS

Start the mix with 20% to 25% water and compare the cleaning ability of **UNI FLORIDA WASH** to your current wash (notice how the dilution reduces V.O.C.'s in the pressroom!) Use diluted on blankets or apply with a damp wash-up rag to remove water-soluble and solvent-soluble glaze. To be more economical, increase the percentage of water up to 30%, or until you find the level that best suits the type of ink, press and work in your plant.

#### SPECIFICATIONS

- Flash Point: 42°C (108°F)
