

PRODUCT PROFILE

UNI 120

The leading one-step wash for rollers & blankets

UNI 120 is a unique blend of solvents and cleaners formulated to clean and rejuvenate lithographic blankets, rubber, synthetic and composition rollers, antioxidants and surfactants formulated with a controlled drying speed. It also increases ink receptivity and prolongs blanket and roller life.

UNI 120 is the most effective blanket/roller wash used in the industry. It will blend with residual water in the pores of offset blankets, penetrate gum glaze and deep down clean the rubber, leaving a velvety smooth surface. **UNI 120** reduces press downtime by speeding color changes and providing cleaner rollers and blankets. Improves printing quality by maintaining proper ink receptivity on rollers and blankets and by completely cleaning out their pores to guarantee uniform colors from start to finish.

UNI 120 removes gum glaze, paper coating, spray powder and ink resins embedded in the pores of offset printing blankets, giving you excellent ink transfer and truer dot reproduction.

ADVANTAGES

- Low odor
- Controlled drying speed
- Helps extend roller and blanket life

DIRECTIONS

BLANKETS:

Use as is or mixed with water. Apply **UNI 120** with a water-dampened rag or onto a blanket that has been washed with a sponge. Then wipe dry. For removal of heavy glaze use **UNI SUPRA**.

ROLLERS:

Apply **UNI 120** with or without water to top rollers and allow to "run in". Set wash-up blade and apply additional **UNI 120** to flush the residue onto blade until solvent on blade is clear. Can be used with **UNI O.D. DEGLAZER** for complete glaze removal and roller conditioning.

SPECIFICATIONS

- Flash Point: 41,1°C (106°F)
