

PROBLEM	PROBABLE CAUSE	SOLUTION
<p>Trapping</p> <p>Poor in multicolour wet printing. Last colours do not transfer properly to the first colours.</p>	<ol style="list-style-type: none"> 1. Too much ink carried on first down colours. Underneath ink film is too heavy. 2. Tack sequence out of balance. First down colours should be tackier than last down colours. 3. Unequal roller stability of quick set inks. One ink tacks up quicker on rollers than the previous colour. 	<ol style="list-style-type: none"> 1. Make first down colours as strong as possible, carry very thin films. (Thin films trap better than thick films.) 2. Adjust to proper tack sequence. 3. Add alkyd to the unstable ink to stabilize its tack on the rollers.
