

PRODUCT PROFILE

UNI 232

Premium water-miscible wash

UNI 232 is an efficient every day wash that can be used frequently without damaging the rubber of lithographic plates. **UNI 232** is water-miscible and removes gum and fountain solution glaze. Cleans all blankets and rollers, and is also recommended for use with the Kompac system.

Water-miscible premium **UNI 232** wash is a high quality one-step ink glaze preventative and a roller and blanket cleaner and conditioner. Used on a regular basis, its rubber rejuvenative properties can dramatically increase the useful life and printing capabilities of rubber rollers and blankets.

It is formulated from a combination of penetrating solvents, which loosen and remove deeply imbedded layers of dried ink, gum, dirt and lint. A special rubber rejuvenating component restores the plasticizers and antioxidants constantly being leached out of rubber. It has a high flash point.

This quality water-miscible wash is engineered for all presses. The special blend of solvents and cleaners maintains rollers and blankets. Premium **UNI 232** penetrates gum glaze and deep cleans, leaving a smooth ink-receptive surface. The 10% to 30% dilution ratio makes this wash extremely economical and helps to reduce V.O.C.'s in the pressroom.

DIRECTIONS

BLANKETS:

Use as a regular wash as needed. Use following a water wash as part of a blanket maintenance program.

ROLLERS:

Use as your regular wash-up. We recommend the use of **UNI O.D. DEGLAZER** with **UNI 232** as part of a roller maintenance program.

SPECIFICATIONS

- Flash Point: 41°C (106°F)
