

UNI CHROME DESENSITIZER

UNI CHROME DESENSITIZER is specially formulated as a desensitizer for chrome rollers used in lithography. Chromium is an ideal surface material for transfer rollers in lithographic dampening systems. It is important that the chrome rollers are desensitized to prevent oxidation. **UNI CHROME DESENSITIZER** provides a thin layer of protection, which permits a maximal transfer of water.

ADVANTAGES

- Protects the chrome rollers against oxidation
- Improves productivity
- Does not contain any V.O.C.'s
- Improves performance of chrome rollers

DIRECTIONS

Clean the chrome rollers with Unigraph solvent or **UNI CHROME CLEANER**. Rinse with water to remove all traces of solvent. Apply **UNI CHROME DESENSITIZER** on all surfaces of the rollers from left to right. Rinse with clean water.
